Subject: EPA's New Cassel/Hicksville Superfund Site - PSW data+report request

Joe,

Thanks again for speaking with me earlier. I've outlined below the info/data that I'm looking for. I'm hoping this isn't too burdensome and that the reports/data are digitized/available. If not, let me know. If NCDOH allows, I could potentially make a trip out there to review the reports and make copies of what I need. Kevin is always telling me I need to spend more time on the island anyways.

1. The tabular data of volatile organic results from Westbury Well 11. Time frame = past 30 yrs.
2. For the following ten public supply wells listed below, I'm looking for :
 - Tabular data of volatile organic results for both influent (pre-treatment) and effluent (post-treatment) samples. There are four wells (marked +metals) where I'm looking for volatiles + metals. Time frame is also past 30 yrs.
 - The engineering reports. I'm ultimately looking for details on the type of treatment in place and treatment capacity. Also, I'm not sure if these engineering reports would cover this, but if available I'm interested in understanding how maintenance is performed on the treatment systems.

Town of Hempstead
Bowling Green 1 (+ metals)
Bowling Green 2 (+ metals)
Roosevelt Field 10
Levittown 2A

Hicksville
4-2
5-2 (+metals)
5-3 (+metals)
8-1
8-3
9-3

Thanks again and give me a call (212-637-4328)/email if there is anything I can elaborate on further.

Regards,
